MCX UPGRADES EXCHANGE SOFTWARE

The Multi-Commodity Exchange (MCX) has adopted innovative technology with advanced features for members. Developed by its parent company, Financial Technologies India (FTIL), a world leader in trading technology and development of next-generation multi-asset financial markets, the latest version of exchange technology DOMETM and clearing and settlement solution CnSTM, offer wide-ranging benefits to customers. The new versions of DOMETM and CnSTM give traders a completely unique experience with introduction of globally accepted new functionalities and performance aspects. FTIL's exchange technology, DOMETM, is a multi-asset exchange product suite, offering an integrated matching engine, including order management and routing engine, risk management and surveillance engine, data distribution engine, and various interfaces for clearing and settlement.
